

# How to answer a business question

One point, taken all the way through, beats three points listed. Every time.

**THE BUSINESS IN THE QUESTION**  
Zara’s Cakes is a small bakery next to a sixth-form college. She is thinking about opening on Sundays.

**A short answer** One thing, stated. Then stop.

Opening on Sundays would increase her revenue.

No development, no context — and none is wanted. Writing more here wins nothing and costs you time you need later.

**A developed answer** One point, taken all the way through.

Opening on Sundays would increase Zara’s revenue, so that she sells to students who are not in college during the week, which means her fixed costs are spread over more sales.

One point, three links, and the business named. Three separate undeveloped points score less than this.

**A calculation answer** Working, units, then what it means.

Fixed costs £400 ÷ (£3.00 – £1.20) = 223 cakes. Zara has to sell 223 cakes a week to break even — about 32 a day, which is more than she sells on a Saturday now.

The number is one mark. Saying what it means for this business is the other, and it is the one most often missed.

**An extended answer** The chain, the other side, then a decision.

...which means her fixed costs are spread over more sales. However, she would have to pay staff at weekend rates, and Sunday trade near a college may be slow in the holidays. Therefore it is worth trying for a term and reviewing the takings, because the cost of stopping again is small.

Both sides, then a judgement that commits — with a reason. A balanced answer that decides nothing has not evaluated anything.

| WHEN A QUESTION ASKS WHAT YOU THINK, IT DEPENDS ON                                                    |                                                              |                                                                            |
|-------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|----------------------------------------------------------------------------|
| its aims                                                                                              | its customers                                                | the timeframe                                                              |
| A business chasing growth and one chasing survival make opposite decisions with the same information. | Who they are, and whether they can easily go somewhere else. | Almost everything costs money now and pays back later. Say which you mean. |

- WHAT LOSES MARKS**
- ✗ Three points listed, none of them developed
  - ✗ Advantages and disadvantages, then no decision
  - ✗ A judgement with no “because” after it

- ✗ Writing about “a business” when the question named one
  - ✗ Repeating the question back as your opening sentence
  - ✗ Numbers quoted from the case study but never used

# Business terms, in plain English

The ones that come up in nearly every question. Say them the way they are written here.

## BUSINESS ACTIVITY

|                                                                                                                  |                                                                                                               |
|------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| <b>Enterprise</b><br>Spotting a chance to make something people will pay for, and taking it.                     | <b>Entrepreneur</b><br>The person who starts the business and carries the risk if it fails.                   |
| <b>Risk</b><br>The chance it does not work and the money put in is lost.                                         | <b>Reward</b><br>What you get if it does work: profit, independence, or doing it your own way.                |
| <b>Aims and objectives</b><br>What the business is trying to achieve. Aims are broad, objectives are measurable. | <b>Stakeholder</b><br>Anyone affected by the business — owners, staff, customers, suppliers, the local area.  |
| <b>Limited liability</b><br>If the business fails, the owner loses what they invested, not their house.          | <b>Organic growth</b><br>Growing by selling more of what you already do, rather than buying another business. |

## FINANCE

|                                                                                                 |                                                                                                             |
|-------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| <b>Revenue</b><br>All the money coming in from sales. Price × quantity. Not the same as profit. | <b>Fixed costs</b><br>Costs that stay the same however much you sell — rent, insurance, salaries.           |
| <b>Variable costs</b><br>Costs that rise as you make more — ingredients, materials, packaging.  | <b>Profit</b><br>What is left when every cost has been taken off the revenue.                               |
| <b>Break even</b><br>The point where revenue exactly covers costs. No profit, no loss.          | <b>Cash flow</b><br>The money moving in and out, and when. A profitable business can still run out of cash. |
| <b>Gross profit</b><br>Revenue minus the cost of making the thing, before any other bills.      | <b>Net profit</b><br>Gross profit minus everything else — rent, wages, interest.                            |

## MARKETING

|                                                                                                          |                                                                                                      |
|----------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| <b>Market research</b><br>Finding out what customers want before spending money guessing.                | <b>Primary research</b><br>Data you collect yourself: surveys, interviews, watching what people buy. |
| <b>Secondary research</b><br>Data someone else already collected: reports, websites, government figures. | <b>Segmentation</b><br>Splitting customers into groups so you can aim at one of them properly.       |
| <b>Target market</b><br>The group the business has decided to sell to.                                   | <b>Marketing mix</b><br>Price, product, promotion and place — all four, working together.            |
| <b>Brand</b><br>What people already think of you before they have bought anything.                       | <b>Unique selling point</b><br>The reason to pick you rather than the shop next door.                |

# Business terms, in plain English

Operations, people, and everything acting on the business from outside.

## OPERATIONS

|                                                                                                          |                                                                                           |
|----------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| <b>Production</b><br>How the thing actually gets made.                                                   | <b>Procurement</b><br>Buying in the materials and services needed to make it.             |
| <b>Supply chain</b><br>Everyone between the raw material and your customer.                              | <b>Quality</b><br>Meeting the standard the customer expects — every time, not on average. |
| <b>Just in time</b><br>Stock arrives as it is needed. Cheap to store, expensive when a delivery is late. | <b>Productivity</b><br>How much output you get per worker, or per hour.                   |
| <b>Economies of scale</b><br>The cost of making each one falls as you make more.                         | <b>Customer service</b><br>What happens before, during and after the sale.                |

## PEOPLE

|                                                                                   |                                                                                                  |
|-----------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| <b>Organisational structure</b><br>Who reports to whom, drawn as a chart.         | <b>Span of control</b><br>How many people one manager is responsible for.                        |
| <b>Recruitment</b><br>Finding and hiring the right people.                        | <b>Internal recruitment</b><br>Filling the job from staff the business already has.              |
| <b>External recruitment</b><br>Hiring somebody from outside the business.         | <b>Motivation</b><br>Why somebody works hard when nobody is watching.                            |
| <b>Financial motivation</b><br>Pay, bonus, commission — motivation you can count. | <b>Non-financial motivation</b><br>Training, promotion, responsibility, being told you did well. |
| <b>Training</b><br>Teaching staff to do the job better than they do it now.       | <b>Retention</b><br>Keeping the staff you already have, instead of replacing them.               |

## THE OUTSIDE WORLD

|                                                                                                            |                                                                                |
|------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| <b>Globalisation</b><br>Businesses buying, selling and competing across the world rather than one country. | <b>Legislation</b><br>The laws a business has to follow. Not a judgement call. |
| <b>Consumer law</b><br>The rules protecting people who buy things.                                         | <b>Employment law</b><br>The rules protecting people who work.                 |
| <b>Interest rates</b><br>The cost of borrowing. When they rise, loans cost more and customers spend less.  | <b>Recession</b><br>A period when the economy shrinks and people spend less.   |
| <b>Inflation</b><br>Prices rising, so the same money buys less than it did.                                | <b>Ethics</b><br>Doing the right thing even when it costs more to do it.       |
| <b>Sustainability</b><br>Meeting needs now without wrecking things for later.                              | <b>E-commerce</b><br>Selling online rather than, or as well as, from a shop.   |
